

Boardroom route and recovery

Keep the story simple: certified product, controlled activation, five decisions.

Final command: `npm run board:showtime`

18-MINUTE ROUTE

One story, four movements

0:00-2:00

Outcome

Slides 1-3. The platform works; the decision is how to activate it.

2:00-7:00

Visitor

Hero, Live Beach, ticket sandbox, sculptors, Passport, partner intake, Guest Services.

7:00-13:00

Operations

Command summary, document queue, partner operations, incident delegation, capability proof.

13:00-18:00

Decision

Slides 10-12. Name the controlled gates, ask for the five decisions, read the motion.

DECISION CLOSE

Ask: approve the activation path, assign account owners, and authorize controlled source intake. Do not ask for blanket approval of live providers, RFID, or closed-loop cashless.

BEFORE THE ROOM

- ☐ Power connected; display and audio tested
- ☐ Do Not Disturb on; screen sleep disabled
- ☐ Run `board:showtime`
- ☐ Open deck, Visitor, Operations, and video
- ☐ Keep synthetic-data label visible

IF ANYTHING DRIFTS

- Do not troubleshoot live in front of the board.
- Switch to the narrated fallback video.
- Return to the deck for decisions.
- Never send, charge, or activate a live provider.

BOARDROOM BOUNDARIES

- Synthetic 2027 data
- No external messages
- No external charges
- No live weather or ferry calls
- No live camera feeds
- No QuickBooks connection
